TIM BABCOCK
GOVERNOR

October 21, 1968

TO THE PEOPLE OF
THE STATE OF MONTANA

Any modern business must necessarily have authentic factual information upon which to predicate decisions. Montana agriculture, our most basic industry, certainly must be classed as a modern business.

This volume of Agricultural Statistics containing authentic facts and figures on the production and marketing of Montana crops and livestock is compiled and published through the joint efforts of our own Montana Department of Agriculture and the United States Department of Agriculture Statistical Reporting Service. Figures contained herein are most valuable to the many people in private, governmental and trade organizational sectors of our economy in formulating plans for the continued growth of our agricultural and general economy. These authentic figures are the basic facts upon which farmers, legislators, agri-business people, farm organizations, state and federal agencies, and many others can and do make intelligent decisions that benefit our entire economy.

I know you join me in saluting the many dedicated people who are responsible for the compilation and publishing of this most useful volume.

Tim Babcock

MESSAGE FROM THE COMMISSIONER

It is with considerable pride that we present Volume XII of this series of statistics so useful and valuable to the many agri-business concerns, federal and state agencies, farmers and ranchers and other individuals who must necessarily formulate plans and implement programs to insure the continued and orderly growth of Montana agriculture, the most basic industry of our economy.

This report is a cooperative service of the Montana Department of Agriculture and the Statistical Reporting Service of the United States Department of Agriculture and is the vehicle through which authentic production and marketing information is made available to all concerned with agricultural development. Accurate and meaningful statistics are most important to any well managed business. Agriculture, with its dynamic technical and scientific changes constantly presenting new growth potential and of course attendant problems, is Montana's biggest business and must necessarily have readily at hand reliable information to properly take advantage of new growth possibilities and be in a position to alleviate some of the problems.

I know that we can count on the continued cooperation of the resourceful Montana farmers and ranchers and the many federal and state agencies that make this publication possible to continue their efforts to make this statistical report even more meaningful.

G. Lowell Purdy

FOREWORD

Agriculture is Montana's leading industry. Cash receipts from farm marketings and government payments totaled 557.1 million in 1967. Montana farms and ranches provided employment of 61,000 persons, and related enterprises furnished employment for many more.

Montana's agriculture is undergoing constant change. Average farm size is expanding. Investment in the farm enterprise continues to rise. Yields are being pushed to new highs. The relative importance of a single farm unit to the economy of the Community, State, and Nation is increasing.

Complete and accurate basic information contributes to improved decision-making in any organization, whether farm unit, private business, corporation or State government. The statistics in this bulletin provide the basic information about Montana's foremost industry.

The data in this publication were assembled with the cooperation of public-spirited Montana people who voluntarily provided information concerning their own operations. While most of the basic information was obtained from farmers and ranchers, supplemental information was acquired from sugarbeet companies, mills and elevators, bean companies, seed processors and dealers, slaughter plants, hatcheries, manufacturers of dairy products, auction markets, railroad companies and others.

State agencies, in addition to those in the Montana State Department of Agriculture which contributed significantly were the Livestock Commission, Livestock Sanitary Board, Railroad and Public Service Commission, and the Board of Equalization. Agencies of the U.S. Government which furnished extensive record material were the Agricultural Stabilization and Conservation Service, Soil Conservation Service, Weather Bureau, and the Extension Service. Credit and thanks are due to these and all others who assisted the Statistical Reporting Service in making data available. Funds for the printing of this publication were furnished by the Montana State Department of Agriculture.

The text and statistical data presented in this bulletin were prepared by the staff of the Statistical Reporting Service, United States Department of Agriculture, under the direction of Frasier T. Galloway, Agricultural Statistician-in-Charge. Staff members who contributed significantly in the preparation of this issue were John E. Cochrane, Olav Rogness, L. Max Cain, E.N. (Swede) Severson, Robert G. Prongua, Agricultural Statisticians; Jerry G. Thorson and Charles R. Meyer, Statistical Student Trainees; Grace A. Cross, Statistical Assistant; and clerks Ellen M. Carkulis, Edith A. Coe, Donna R. Doggett, Rita Rae East, Jean M. Eickmeyer, Anita M. Engstrom, Charlotte A. Hagen, Roy D. Jones, Rose M. Miller, Ollie K. Mires, Lois C. Rigler, and Eleanor A. Teigen.

Offices of the Statistical Reporting Service are located in Room 208, McGaffick Steamboat Block, 616 Helena Avenue, Helena, Montana. Estimates published by this agency are available to anyone without charge by writing to the Agricultural Statistician, Post Office Box 1726, Helena, Montana 59601.

MONTANA CROPS AND LIVESTOCK – 1966

Winter wheat seeding got underway as usual, in late August 1965, but was delayed for 6 weeks by wet weather. Seeding operations extended to the end of October. Precipitation was light during October and November, but mild temperatures and good soil moisture accumulation from August and September kept the crop growing well until about mid-December when light snowfall and colder weather forced it into dormancy. Seedlings came through the winter in good condition. Though snowfall was light to moderate, it was generally sufficient to protect against winter hazards in most areas. However, cold spring weather retarded growth. Stands were good, but scant rainfall and wind damage deteriorated condition during late spring.

Soil moisture was short during most of the 1966 growing season in the southern half of Montana. Also at various times throughout the spring and summer, topsoil moisture was short in other areas of the State with the exception of the north central counties. However, all crops grown in summer fallowed ground made near normal early season growth because of above average moisture accumulated from heavy rains received during August and September 1965 which provided a moisture reserve for the 1966 growing season. This reserve of soil moisture, together with the small amounts of rainfall received during the spring and summer of 1966, was sufficient to sustain most crops to maturity. Yields were good in the northern half of the State but output was disappointing on non-irrigated land in southern counties, many of which experienced the driest growing season on record. In some southern counties, numbers of livestock were reduced to better align them with available feed, hay, and water supplies. Growers in all counties designated as "Disaster Counties" by the U.S.D.A. were permitted to pasture and harvest hay from Conservation Reserve acres. These counties were; Beaverhead, Carter, Daniels, Fallon, Musselshell, Richland, Roosevelt, Rosebud, Sheridan, Valley, and Wibaux. Irrigation water was generally adequate throughout the season for the larger projects, but supplies were low or exhausted on some smaller projects. The first killing frost of the season did not occur until the last week of September and some areas did not have frosts until about two weeks later.

During late winter and the early spring of 1966, the condition of range and livestock remained good. Calving and lambing losses were light. Beginning in April, range feed conditions declined contra-seasonally and remained below average until November.

CROPS: Despite below normal rainfall, Montana's production of most crops exceeded average. The exceptions were winter wheat, oats, rye, flaxseed, and alfalfa hay. Compared with the previous year, the 1966 production was larger for corn, durum wheat, barley, potatoes, dry beans, sugarbeets, alfalfa seed, apples, and cherries. Harvested acreage of the principal crops, at 8,039,800 acres was 3 percent below the 8,306,000 acres harvested in 1965.

Montana's production of all wheat totaled 99,694,000 bushels in 1966, 5 percent less than in 1965. Yield per acre at 26.6 bushels was the highest in recent years. This was partially the result of more winter wheat in relation to spring wheat, and to a higher percentage of irrigated wheat harvested and less non-irrigated acreage because of greater abandonment in southern parts of the State where some dry-land wheat failed to make a crop. Wheat was harvested from 3,745,000 acres, 10 percent less than a year earlier. Winter wheat yield at 30.0 bushels per acre was the largest ever attained, but production at 64,290,000 bushels was 5 percent less than the previous year because of a 7 percent reduction in acreage-2,143,000 acres, compared with 2,329,000 in 1965. The durum crop of 3,680,000 bushels was 22 percent above the 1965 output. Other spring wheat at 31,724,000 bushels, was down 9 percent from 1965.

The State's barley crop of 63,564,000 bushels exceeded 1965 production by 27 percent and was the largest ever produced. Yield at 38.5 bushels per acre was equal to the previous year, but acreage was more than one-fourth larger. Oats output of 7,469,000 bushels was 22 percent below the 1965 production of 9,605,000 bushels. The flaxseed crop of 147,000 bushels was the smallest since 1961, and rye at 126,000 bushels was the smallest in 10 years.

In spite of set-backs by frosts in the spring, the output of sugarbeets at 1,006,000 tons was the third largest of record. Average yield at 17.1 tons per acre was exceeded only by the 17.8 tons realized in 1963. The dry bean crop, at 252,000 cwt., clean basis, was 16 percent larger than in 1965. The estimate of 1,360,000 hundred weight of potatoes was 3 percent more than the previous year.

Alfalfa seed production was estimated at 4,000,000 pounds, much above the previous year's small crop of 2,295,000 pounds. Red clover seed at 182,000 pounds was 35 percent smaller than in 1965. The 1966 all hay crop totaled 3,297,000 tons, 14 percent less than 1965's relatively large crop.

Total production of sweet and sour cherries at 2,800 tons was sharply above the previous year's small output of only 290 tons. The apple crop at 30,000 bushels was half again bigger than the 20,000 produced in 1965.

LIVESTOCK: Montana farmers and ranchers had 2,869,000 cattle and calves, including dairy stock, on hand January 1, 1967, one percent above the 2,841,000 head on hand January 1 at the beginning of 1966. This established a new high and marked the fifth consecutive year of increase in Montana cattle population.

The number of stock sheep and lambs on farms and ranches on January 1, 1967 was 1,226,000 head, 4 percent less than at the beginning of 1966.

Hogs and pigs on Montana farms on January 1, 1967 were estimated at 153,000 head, 24 percent more than the 123,000 head a year earlier.

MONTANA CROPS AND LIVESTOCK—1967

Seeding of winter wheat began in late August and was completed by mid-October at about the usual dates. Moisture was adequate for germinating the seed. Practically all seedlings had emerged by early November, but stands were uneven in many areas because of lack of moisture. In early December, the condition of winter wheat was rated good except in the central district where it was only fair. The crop was intermittently covered by snow during the winter. High winds caused some damage from soil blowing, mainly in north central and central areas. Winter wheat remained dormant until late March, when it began greening in favored areas. Growth and development was retarded by cold and wet weather, but stands were good with little winterkill. By mid-June, development of the crop was about a week later than the average of the four previous seasons. However, condition of the crop was good to excellent.

Soil moisture supplies in early April were rated adequate with the exception of a few southeastern counties. Subsoil moisture was mostly adequate throughout the State. Two heavy snowstorms in April and early May improved soil moisture supplies, but retarded field tillage work. Several areas had little or no spring grain planted until the latter part of May. The central part of the State received heavy rains in June which resulted in flooding along the Musselshell River. The damage in Musselshell and Golden Valley counties amounted to one million dollars, according to State Disaster Committee reports, but the damage in Petroleum and Rosebud counties was not as great. The floods ruined many hay fields. Water stood in the low spots and drowned out some alfalfa. In some cases, the river cut new channels through existing fields. Irrigation ditches were washed out and bridges and roads were damaged.

An area of soil moisture shortage developed in July in the northern counties from Liberty County east to the North Dakota border. Many localities in that area recorded very little rainfall during that period. Shortages also developed in many localities west of the Divide. Rainfall in July, August, and the first two weeks of September was much lower than average. However, generous rains fell in most areas east of the Divide around mid-September. It was the end of September before significant rainfall was received west of the Divide.

Winter ranges were generally open but provided only a limited amount of grazing. Moderate to heavy snowfall in March, April, and early May of 1967, improved early summer range conditions but caused above normal calf and lamb losses. Feed supplies were depleted. Thereafter, range grass condition was about normal and livestock finished the year in good condition.

CROPS: In 1967, Montana farmers and ranchers produced above average crops of wheat, potatoes, sugarbeets, hay, and corn for grain. This was accomplished despite a late spring with flooding in some areas followed by droughty conditions, especially in northern counties in July and August. Compared with the previous year, the 1967 output was larger for winter wheat, potatoes, sugarbeets, hay, and corn for grain, but smaller for all other crops.

Statewide, acreage of all crops harvested totaled 8,627,100 acres in 1967, 7 percent more than in the previous year.

Production of all wheat totaled a record 119,136,000 bushels, 20 percent more than the 99,694,000 bushels produced in 1966. The crop exceeded the previous high of 114,232,000 bushels produced in 1963 on 5,969,000 acres. Acreage harvested in 1967 at 4,734,000, was up 26 percent from 1966. It was the largest wheat acreage harvested since 1956. Winter wheat totaled 84,210,000 bushels, 31 percent more than in 1966. The crop was harvested from 2.8 million acres, which was 31 percent more than in 1966. Yield per acre, at 30.0 bushels, tied 1966 for highest on record. Spring wheat (other than Durum) yielded 18.0 bushels per acre, 4 bushels less than in the previous year. This more than offset a 17 percent increase in acreage harvested and resulted in production of 30,366,000 bushels, 4 percent below 1966. Durum wheat production at 4,560,000 bushels was 24 percent larger than the previous year's crop.

Reduced acreage as a result of larger wheat allotments, coupled with late spring planting and below normal precipitation during July and August, resulted in the lowest production of barley and oats since 1961. Montana's 1967 barley crop, estimated at 37,022,000 bushels, was 42 percent smaller than in 1966. Yield at 29.5 bushels per acre was 9.0 bushels less than the previous year. Oats totaled nearly 5.2 million bushels compared with 7.5 million bushels in 1966.

Flaxseed production, at 48,000 bushels, was well below the 147,000 bushels produced in 1966. Rye at 95,000 bushels was 25 percent below the previous year. A late fall boosted the output of sugarbeets. At 1,007,000 tons, it was the second largest crop on record—a yield of 17.6 tons per acre was exceeded only by the 17.8 tons realized in 1963.

The potato crop, at 1,476,000 cwt., was 9 percent more than the previous year—a yield of 180 cwt. per acre compares with 170 a year earlier. The estimated production of 144,000 bags of dry beans was 43 percent less than in 1966.

Alfalfa seed production at 3,060,000 pounds compares with 4,000,000 pounds in 1966. The red clover seed crop, at 140,000 pounds, was 23 percent below the previous year or less than half the average.

Montana farmers and ranchers harvested a record 3,864,000 tons of hay in 1967 from 2,370,000 acres. Alfalfa hay totaled a record 2,404,000 tons and 614,000 tons of wild hay were harvested. The sweet cherry output of 2,780 tons was a record high.

LIVESTOCK: Montana farmers and ranchers had 2,984,000 cattle and calves, including dairy stock, on hand January 1, 1968. This was 4 percent above the 2,869,000 head on hand at the beginning of 1967, established a new high, and marked the sixth consecutive year of increase in the cattle population.

The number of stock sheep on farms and ranches on January 1, 1968 was 1,165,000 head, 5 percent less than at the beginning of 1967.

Hogs and pigs on farms on January 1, 1968 were estimated at 149,000 head, 6 percent less than the 159,000 head a year earlier.
